

## Class 11: Anaphora and co-reference resolution

---

# Things and naming things

# What is co-reference resolution?

THE prime minister has fired secretary of state Priti Patel while telling her she wishes with all her heart it was the other way around.

May confessed to Patel that although having secret meetings with the Israelis was a sackable offence, it paled in comparison to her own dire performance but “sadly nobody’s willing to pull the trigger.”

Patel said: “It was so awkward. She said ‘You don’t know how often I’ve dreamt of sitting on your side of the desk, finally being summarily dismissed for my gross incompetence.’

# What is co-reference resolution?

THE prime minister has fired secretary of state Priti Patel while telling her she wishes with all her heart it was the other way around.

May confessed to Patel that although having secret meetings with the Israelis was a sackable offence, it paled in comparison to her own dire performance but “sadly nobody’s willing to pull the trigger.”

Patel said: “It was so awkward. She said ‘You don’t know how often I’ve dreamt of sitting on your side of the desk, finally being summarily dismissed for my gross incompetence.’”

# What is co-reference resolution?

THE prime minister has fired secretary of state Priti Patel while telling her she wishes with all her heart it was the other way around.

May confessed to Patel that although having secret meetings with the Israelis was a sackable offence, it paled in comparison to her own dire performance but “sadly nobody’s willing to pull the trigger.”

Patel said: “It was so awkward. She said ‘You don’t know how often I’ve dreamt of sitting on your side of the desk, finally being summarily dismissed for my gross incompetence.’

# What is co-reference resolution?

THE prime minister has fired **secretary of state** **Priti Patel** while telling **her** she wishes with all her heart it was the other way around.

May confessed to **Patel** that although having secret meetings with the Israelis was a sackable offence, it paled in comparison to her own dire performance but “sadly nobody’s willing to pull the trigger.”

**Patel** said: “It was so awkward. She said ‘**You**’ don’t know how often I’ve dreamt of sitting on **your** side of the desk, finally being summarily dismissed for my gross incompetence.’

# What is co-reference resolution?

THE prime minister has fired secretary of state Priti Patel while telling her she wishes with all her heart it was the other way around.

May confessed to Patel that although having secret meetings with the Israelis was a sackable offence, it paled in comparison to her own dire performance but “sadly nobody’s willing to pull the trigger.”

Patel said: “It was so awkward. She said ‘You don’t know how often I’ve dreamt of sitting on your side of the desk, finally being summarily dismissed for my gross incompetence.’

# Noun phrases and reference

- NPs usually refer to entities in the world
- NPs may co-refer, meaning they refer to the same entity
- They may also be nested

Однажды **Пушкин** написал письмо **Рабиндранту Тагору**.  
« **Дорогой далекий друг**, — писал **он**, — **я** **Вас** не знаю, и **Вы**  
**меня** не знаете. Очень хотелось бы познакомиться. Всего  
хорошего. **Саша** ». Когда письмо принесли, **Тагор** предавался  
самосозерцанию. Так погрузился, хоть режь **его**. **Его** жена  
толкала, толкала, письмо подсовывала — не видит. **Он**, правда,  
по-русски читать не умел. Так и не познакомились.

# Kinds of reference

Easier

Harder

Interesting linguistics

**Bound variables**

She hurt *herself*

Я имею *свой* баян

**Free variables**

Maša read *her* book

*Она* очень нравилась.

**Referring expressions**

Carles Puigdemont

Catalan president

Puigdemont

president of Catalonia

President Puigdemont

More frequent

# Coreference, anaphora, cataphora

- **Coreference**
  - Two *mentions* (NPs) refer to the same entity
  - May be identical or completely different
- **Anaphora, Cataphora**
  - Interpretation is in some way dependent on an antecedent
  - Traditionally the antecedent came first, but not always the case.

# Cataphora

(Oscar Wilde – The Picture of Dorian Grey)

# Anaphora vs. coreference

We went to a concert last night. The tickets were really expensive

- Not all anaphoric relations are coreferential, e.g. bridging anaphora
- Multiple identical NP matches are often coreferential but not anaphoric

# Two different things

## Anaphora resolution

## Co-reference resolution

# Applications

Machine translation:

Text summarisation:

Information extraction:

# Pronominal anaphora resolution

---

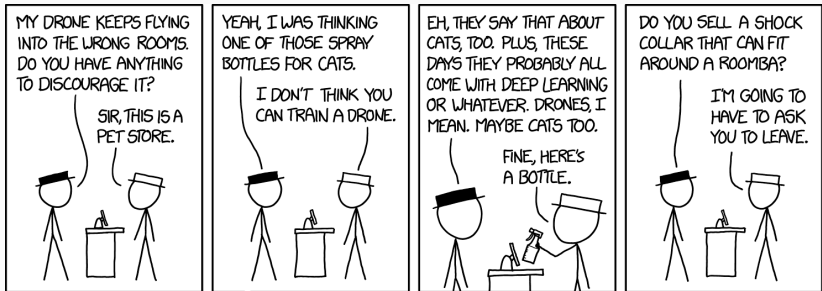

# Hobbs' (1978) algorithm/1

- Simple syntax-based algorithm for 3rd person anaphoric pronouns
- Requires:
  - Constituency parser
  - Gender and number 'checker'
    - Parsers for English rarely include gender information for nouns
- Searches current and preceding sentences in a breadth-first, left-to-right manner, stops when it finds a matching NP

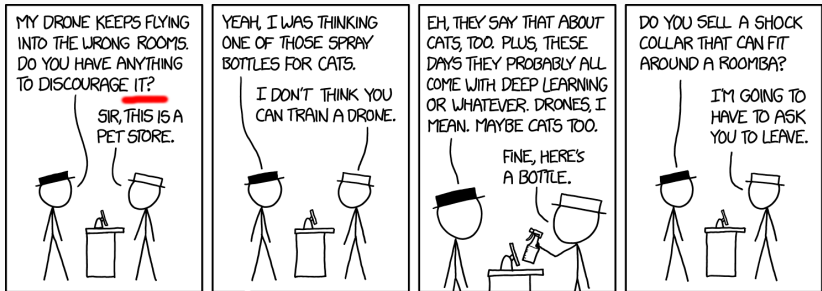

## Hobbs' (1978) algorithm/2

- Right to left search in current sentence
- If not valid antecedent fine, try previous sentence
  - Left to right breadth-first search

# Hobbs' (1978) algorithm/3

# Hobbs' (1978) algorithm/3

## Hobbs' (1978) algorithm/4

- Start search in NP<sub>5</sub> in S<sub>2</sub>
- Reject NP<sub>4</sub>, no intervening NP
- Reject NP<sub>3</sub>, feature mismatch
- Move to S<sub>1</sub>
- Accept NP<sub>1</sub>

- Supervised machine learning approach
- Requires corpus where each pronoun has been linked with its antecedent
- Extract positive and negative examples
- Train binary classifier
  - True: is co-referent
  - False: is not co-referent

Let's take our previous example:

Positive example:

- (it, my drone)

Negative examples:

- (it, anything)
- (it, you)
- (it, the wrong rooms)

- **strict gender** [true, false]
- **compatible gender** [true, false]
- **strict number** [true, false]
- **compatible number** [true, false]
- **sentence distance** [0, 1, 2, ...]
- **Hobbs distance** [0, 1, 2, ...]
- **grammatical role** [subject, object, ...]
- **linguistic form** [proper, def, indef, pronoun]

Can you think of some other useful features ?

- For each pronoun,
  - For each NP we have seen so far,
    - Classify if NP is an antecedent of the pronoun

# Co-reference resolution

---

Однажды Пушкин написал письмо Рабиндранату Тагору .  
« Дорогой далекий друг , — писал он , — я Вас не знаю, и Вы  
меня не знаете. Очень хотелось бы познакомиться. Всего  
хорошего. Саша ». Когда письмо принесли, Тагор предавался  
самосозерцанию. Так погрузился, хоть режь его . Его жена  
толкала, толкала, письмо подсовывала — не видит. Он , правда,  
по-русски читать не умел. Так и не познакомились.

Пушкин, он<sub>1</sub>, я<sub>1</sub>, меня<sub>1</sub>

Рабиндранату Тагору, Дорогой далекий друг, Вас<sub>1</sub>, Вы<sub>1</sub>, Тагор, его<sub>1</sub>, Он

## Additional features

Input is a dependency tree.

Constraint-based, rules like:

$C = \langle ANA, ANT, DIR, DIST, PROP \rangle$

- ANA, ANT = constraints on the anaphor and antecedent
- DIR = direction (e.g. forward, backwards)
- DIST = how far to look (in sentences)
- PROP = should features (e.g. gender) be propagated?

Example rules:

# Evaluation

---

# Model-Theoretic coreference scoring

## Shared tasks

---

# Practical
